Art Unit: 1648

DETAILED ACTION

1. The examiner of your application in the Patent and Trademark Office has been changed. To aid in correlating any papers for this application, all further correspondence regarding this application should be directed to Bo Peng, Art Unit 1648.

2. Upon a review of the prosecution history in this application, the Office has determined that it is necessary to vacate the previous Office action. The Office regrets any inconvenience this may cause Applicant.

3. The Office acknowledges the receipt of Applicant's Preliminary Amendment filed on January 23, 2004. Claims 1-77 are cancelled. New claims 78-108 are added. Claims 78-108 are pending and are under consideration in the instant application.

Election/Restrictions

4. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 78-98, drawn to a method of treating a subject afflicted with HIV-1 or preventing a subject from contracting HIV-1, which comprises administering to the subject an effective dose of a monoclonal antibody or a fragment against CCR5, classified in class 424, subclass 9.1.

II. Claims 99-108, drawn to a composition which comprises a monoclonal antibody of a fragment against CCR5, classified in class 424, subclass 192.1.

5. The inventions are distinct, each from the other because of the following reasons:

6. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product

Art Unit: 1648

as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case the claimed method of treating HIV-1 can be practiced with the commercially available reverse transcriptase inhibitors, fusion inhibitors, and protease inhibitors.

7. Because these inventions are distinct for the reasons given above, have acquired a separate status in the art as shown by their different classification and/or recognized divergent subject matter, and require non-coextensive literature and sequence searches even though in some cases the classification is shared, restriction for examination purposes as indicated is proper.

8. The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder. All claims directed a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

9. In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. §101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained.

Withdrawn process claims that are not commensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoinder

Art Unit: 1648

in accordance with the above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. **Failure to do so may result in a loss of the right to rejoinder.**

10. Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.
